

# Concrete Structures of the Midwest, Inc.

## Project Fact Sheet

### Soldier Field

Developer:	Chicago Bears
General Contractor:	TBMK, JV
Architect:	Lohan, Wood & Zapata
Structural Engineer:	Thornton-Tommasetti
Location:	Chicago, Illinois

Type of Structure: Stadium

Constructing a new, modern NFL stadium within the confines of an existing historical building was a complex task. The site includes the stadium, two parking structures, and miles of walkways and acres of park facilities. All phases of work had to be completed within 14 months, in time for opening day of the 2003 Chicago Bears home season.

Concrete Structures' scope of work included all cast in place foundations, slabs, stairs, sidewalks, and all concrete on metal decks. 5000 tons of reinforcing steel and 70,000 cubic yards of concrete was placed on the project.
